

My Learning Process: A Sample for Presenting the Learning Process to Students

Instructions for Teachers:

When using the method of learning menus, we are aiming for students to have the opportunity to choose from different defined activities throughout the learning process. They are also able to choose the order in which they would like to complete the assignments, as well as the time in which they will be performed.

The worksheet below can be used as a way to present the learning process.

You can describe the various activities and then allow students to create their own routes to complete them. Of course, you can decide on the amount of flexibility you would like to give to students.

Using a worksheet like this allows students to reflect on their choice process and overall learning.

*The worksheet can also be used as an evaluation tool.

Learning Menus: My Learning Process

Below are a list of activities you must complete while learning about the subject of:

Please Note:

In the diagram below you can find the opening and closing assignments. Along the way, you can choose the order in which the other activities are completed. Write the name of the assignment in the appropriate place on the page.
